

EUROBATS

EUROBATS

Publication Series
No.

7

This publication is dedicated to the 25th Anniversary of the Agreement on the Conservation of Populations of European Bats, which was opened for signature on the 4th of December 1991. The book contains common names for 53 species of bats occurring in the agreement area in 50 languages together with concise explanations of their origin and meaning.

The author, Mr. Peter H.C. Lina, conceived this amazing dictionary more than five years ago in order to help local bat researchers and conservationists with the popularisation of their results and in order to standardise the application of vernacular names in alignment with their zoological ones.

Given that Peter Lina was among the several experts who drafted the first version of the Agreement at a meeting in London on the 19th of November 1987, he can reasonably be called a founding father of EUROBATS. In 1998, he was elected as Chair of the newly established scientific working group and was presiding over the Advisory Committee of EUROBATS until 2015, when he voluntarily stepped down to give way for younger generations.

Peter Lina began his work for bat conservation in 1973, when he arrived at the former Dutch Ministry of Culture, Recreation and Social Work. He worked within the Dutch Government until 2002. From 2002, he has been an Honorary Research Associate at the Naturalis Biodiversity Center, the National Museum of Natural History in the Netherlands.

Peter has taken part in many conferences abroad, including all European Bat Research Symposiums, one of which he organized in 1996.

He has published around 150 scientific papers and communications, including those on bats, birds, viruses, immunology and many other topics.

Foreword

It is a great pleasure for us to launch this new volume of the EUROBATS Publication Series at the occasion of the 25th anniversary of the Agreement. Peter H.C. Lina and a large group of contributors are presenting for the very first time the names of all bat species occurring in the agreement area in all national and even a few regional languages.

This has been a tremendous work over the past years since many names did not previously exist in quite a number of languages but had to be developed by national experts in sometimes lengthy consultation processes in order to meet the highest linguistic and scientific standards. Having now all bat names available in all national languages will be highly beneficial for educational and public awareness raising activities, bringing these wonderful creatures closer to the people.

As a small but very interesting extra, an introductory chapter explains the etymology of the word “bat” in the various languages, without doubt the most poetic expression being the “night butterfly” from Malta.

Apart from the benefits already mentioned above, here is an additional one: As an effect of climate change some bat species are expanding their geographical distribution range and are occurring in countries where they could never before be observed. With this book at hand, you will be able to welcome them appropriately in your own language.

I sincerely wish to thank Peter H.C. Lina and all those who have contributed to this achievement and invaluable asset for our bat conservation efforts!

December 2016

Andreas Streit
Executive Secretary, EUROBATS

Introduction

53 bat species occur within the geographical scope of EUROBATS, which are listed in the Annex to the Agreement. They all have a unique binary scientific name. It is better to use the term scientific name instead of Latin name, because many scientific names are also derived from Greek. Additionally, many bat species also have a common name, however, not all bat species listed in the Annex have a common name in all languages. The reasons for this could be that, for example, these bat species do not exist in a given language area, or that they have only recently been discovered as a full species by DNA research.

For people who are not familiar with bats, scientific names have no significance in the recognition of species. On the other hand, a common name in their own language sounds more familiar, even if they have no idea how the species looks like and where it occurs.

With this EUROBATS publication it is easy to find a common name of a bat species in your own language from a common bat name in a foreign language. When you see, for example, on a Polish calendar a picture of a bat with the title Karlik malutki, you

could then go to the Polish list in which Polish common names of bat species are listed in alphabetical order. Karlik malutki has the number 29. You could then go to number 29 in the second list, and you would find there the scientific name and the common name for this species back into your own language or in another language that you need.

But the availability of common names in the languages within the geographical scope of EUROBATS could also be used for other purposes, such as for field guides on European bats or other publications about bats in a particular language. The use of common names may also contribute to the increase of public awareness for bat conservation.

I consider this publication a birthday present from the bat and linguistic experts, and all others, listed in the Acknowledgements, to EUROBATS for its 25th anniversary.

Peter H.C. Lina

Etymology of the word bat and taxonomic names

The origin of many names for the bat in European languages is often obscure, complex, and sometimes controversial. However, there are several consistent patterns in naming these animals which are obviously related to the human perception of bats. The meaning of the word bat in a language occasionally also gives details of their natural history as it is the case for the Bulgarian word *prilep* (прилеп), which probably derives from the verb *прилепям* (*priljepjam*) = to stick, and refers to the ability of bats to stick to vertical surfaces. Another example is the Catalan *rata-pinyada*, which means “rats that make clumps”, as bats effectively do in caves or other roosts.

It is remarkable that vernacular names reflect distinctive features of bat appearance regardless of geographically and linguistically defined borders.

Fluttering mice

Allegedly, the English word “bat” is a dialectal alteration of the Middle English *bakke* (early 14th century), which is probably related to the Old Swedish *natbakka*, the Old Danish *nathbakkæ* = night bat, and the Old Norse *leðrblaka* = leather flapper. If so, the likely original meaning of the name was “flapper”. The present Icelandic name for the bat is *leðurblaka* and derived from *leður* = leather, and *blaka* = to flap. The Old English word for the bat was *hreremus*, from *hreran* = to shake: A rattle-mouse is attested from the

late 16th century as an old dialectal name for the bat. The majority of Germanic languages possess cognate names for the bat, which can be tracked down to a group of old German verbs denoting a flutter: Danish *flagermus*, German *Fledermaus*, Dutch *vleermuis*, Luxembourgish *Fliedermaus*, Swedish *fladdermus*, Norwegian *flaggermus* and Frisian *flearmûs*. *Flitter-mouse*, *flinder-mouse*, or *flicker-mouse*, with the same meaning, were also occasionally used in English. Correspondingly, the Finnish *lepakko* derives from the verb *lepattaa* = flapping. Apart from that, the alleged congeniality of bats and rodents is reflected in Rhaeto-Romance *utschè-mezmieur*, meaning a “bird half-mouse”, and in the alternative Catalan name *rat-penat*, which means a rat with wings.

“Bat Avenue” in Wageningen, the Netherlands.
© Peter H.C. Lina

With its similar meaning, the Russian name летучая мышь (a flying mouse) appeared only in the 19th century and it represents a mere translation from German, whereas ancient Slavic words *kozhan* and *netopyr* remained in the language as vernacular names for the genera *Eptesicus* and *Pipistrellus* respectively.

leather; the Albanian *lakuriq nate* unites *lakuriq* = hairless skin, and *nate* = night; the Estonian *nahkhiir* derives from the nouns *nahk* = skin or leather, and *hiir* = mouse; the Breton *askel grohen* means a leather wing.

The contemporary French *chauve-souris* derives from the Latin name *cawa sorix* or *kawa sorix* (*kawa* is a Gallic word), meaning an owl mouse. This was later modified to *calva sorix*, which means a bald mouse.

Besides the above mentioned examples, in modern Scottish Gaelic bats are called *ialtag-anmoch* (*anmoch* = late), *ialtag-leathair* or *ialtag-leuthraigh* (*leathair*, *leuthraigh* = leather), and in Irish Gaelic *sciathán leathair* = leather wing. However, the words *ialtóg* (Irish Gaelic) and *ialtag* (Scottish Gaelic) with unclear etymology are used for all individual species names in both languages.

Leather wings

A number of vernacular names refer to the "leathern" appearance of bats and their wing membranes. For instance, the most commonly used Armenian name *chghdzhik* (չղձիկ) probably alludes to their leather wings; the Lithuanian *šikšnosparnis* derives from *šikšna* = tanned skin without hair, and *sparnas* = wing; the Latvian *sikspārnis* is derived from the Lithuanian name. The Belarusian and Ukrainian *kazhan* (кажан) cognate to the word *kozha* (кожа) meaning

"Bat Street" in Liège, Belgium.
© Frédéric Forget

Blind mice

A wide-spread misconception about total absence of the sense of vision in bats is reflected in the Bosnian and Croatian *šišmiš*, Montenegrin and Serbian *slijepi miš*, Galician and Portuguese *morcego* and Castilian *murciélag*, which all have the meaning of "a blind mouse". Similarly, the Arabic *khaffash* (خفافش), deriving from the word *khafish* (خفّش), can either denote the one who was born with a weak vision, narrowed or absent eyes, or the one that is able to see at night but not during the day. The present generally used Persian name *khoffash* (خفّاش) has derived from the Arabic *khaffash* (خفافش).

The night flyers

The Proto-Slavic word *netopyrjъ*, usually interpreted by linguists as "a night flyer", was inherited by the Czech *netopýr*, Slovak *netopier*, Slovenian *netopir*, and Polish *nietoperz*.

In the same way, the Italian *pipistrello* stems from the early medieval *vipistrello*, which was in turn derived from the Latin *vespertilio* and refers to *vesper* = evening. Accordingly, the Hebrew name *atalef* (אַתֵּלֶף), which is mentioned in the *Tanakh* (Old Testament) in Leviticus 11:19, Deuteronomy 14:18, and Isaiah 2:20, derives from the word *alata* = dark or lightless, and the word *af* = flight.

In the Caucasus, Georgians call bats *ghamura* (ღამურა), which derives from the word *ghame* (ღამე) = night, and denotes something you can meet at night. Similarly, Armenians depict the lifestyle of bats in *gis-heramuk*, which means "a night mouse".

The Greek *nychterides* means "an animal of the night".

The Persian old and local name, especially in southern Iran, *shab parreh* (شب پره) derived from *shab* = night, and *parreh* = flyer.

A parallel meaning exists in Albanian, as the bat is sometimes named "a bird of the night" in this language. Although the Basque *saguzar* originates from *sagu* = mouse, and *zahar* = old: old mouse, there is a synonym *gauenara*, which means "a night swallow". The most romantic among the "night-related" names is the Maltese one, *farfett il-lejl*, deriving from *farfett* = butterfly and *il-lejl* = night, literally meaning "a butterfly of the night".

Names with unknown meaning and/or unknown etymology

The Azerbaijani and Turkish *yarasa*, the Hungarian *denevér*, and the Welsh *ystlum* have intricate origins and their etymology could not be explained. The Macedonian *liljak* (лилјак) and Romanian *liliac* are consonant with the word *leylak* – the extant Turkish name for a stork.

"Bat Street" in Budapest, Hungary.
© Gábor Csorba

Plecotus: derived from the Greek *plekto* = curled, and *otus* = ear → *curled ears*.

Rhinolophus: derived from the Greek *rhis* (genitive *rhinos*) = nose, and *lophos* = ornament → *referring to the very characteristic facial nose-leaf*.

Rousettus: derived from *russet*, a dark brown colour with a reddish-orange tinge.

Tadarida: comes from the Sicilian and Calabrian dialectic word *tadarida* (with variations like *taddarita*, *taddarida*, *tallarita*, *tallarida* and *taddrarita*) which refer to bat regardless of the species.

Taphozous: derived from the Greek *taphos* = tomb, and *zoos* = alive, living → *one that lives in a tomb*.

Vespertilio: derived from the Latin *vespertilis* = bat, based on the Latin *vesper* = night, and the Greek *espera* with the same meaning.

Barbastelle Crescent in the village of Hethersett, county of Norfolk, England.
© John Goldsmith

Etymology of generic names of European bat species

Barbastella: derived from the Italian *barbastello*, which comes from the dialectic word *barbastel* in Ferrara (a province in Italy) derived from the Latin *vespertilio*.

Eptesicus: Latinisation of the Greek words *epten*, past tense of the verb *petomai* = flying, and *oikos* = house → *one that flies near houses*.

Hypsugo: derived probably from the Greek *upsigonos* → *born in the air*.

Miniopterus: derived from the Latin *minus* = less, and the Greek *pteron* = wing → *narrow-winged*.

Myotis: derived from the Greek *mus* = mouse, and *ous/otos* = ear → *mouse with (large) ears or ears of mouse*.

Nyctalus: derived from the Latin *nyctalopia* being Latinised from the Greek *nuktalops*: *nukt* = night, *aloas* = blind → *night-blind*.

Pipistrellus: derived from the Italian *pipistrello* = bat.

Etymology of scientific bat species names, which not derived from person's names

aegyptiacus: of Egypt.

alcathoe: or Alcithoe (Alkithoê), in Greek mythology a daughter of Minyas, and sister of Leucippe and Arsippe.

anatolicus: of Anatolia (Asia Minor).

aurascens: derived from the Latin *aureus* = golden. The aureus was a golden coin of ancient Rome and was regularly issued from the 1st century BC to the beginning of the 4th century AD.

auritus: a Latin word meaning "with long ears"

austriacus: means "Austria" since the type locality is Vienna in Austria.

azoreum: of Azores.

barbastellus: derived from the Italian *barbastello*, in turn originated from the Latin *vespertilio*.

darjelingensis: of Darjeeling, a town and district in West Bengal, Northeast India.

dasychneme: derived from the Greek *dasus* = haired, and *kneme* = leg → *haired legs*.

emarginatus: derived from the Latin *emargino* = with a part of the margin removed or notched, referring to the expanded notch of the ear.

euryale: "far-roaming" or "she of the wide briny sea", in Greek mythology Euryale was the second eldest of the Gorgons, three vicious sisters with brass hands, sharp fangs, and hair of living venomous snakes.

ferrumequinum: derived from the Latin *ferrum* = iron, and *equinus* = of the horse → *horseshoe*.

hajastanicus: of Hayastan (Armenia).

hipposideros: derived from the Greek *hippos* = horse, and *sideros* = iron → *horseshoe*.

isabellinus: *isabelline* = pale cream-brown colour.

lasiopterus: derived from the Greek *lasios* = wool, and *pteron* = feather, wing → *woolly (or hairy) wings*.

macrobullaris: derived from the Greek *makros* = large, long, and the Latin *bulla* = bladder, bulge. The *bulla tympanica* is a part of the temporal bone and it surrounds the middle ear.

maderensis: of Madeira.

murinus: derived from the Latin *mus* = mouse, *murinus* = of the mouse.

mystacinus: derived from the Greek *mystax* = upper lip, whiskers.

nipalensis: of Nepal.

noctula: derived from the Latin *nox* = night.

nudiventris: derived from the Latin *nudus* = bare and *venter* = belly → *bare-bellied*.

pallidus: pale.

Street in Leiden, the Netherlands, dedicated to Coenraad Jacob Temminck (1778–1858), who described *Eptesicus isabellinus*.
© Peter H.C. Lina

pipistrellus: derived from the Italian *pipistrello* = bat.

punicus: derived from Punic, Carthaginian (of Carthage).

pygmaeus: derived from the Greek *pygmaios* = dwarf.

sardus: of Sardinia.

serotinus: derived from the Latin *serus* = late, *serotinus* means that it comes late.

teneriffae: of Teneriffe.

teniotis: seems to come from the Greek *taina* and the Latin *taenia* = fold and the Greek *ous* or *otos* = ear → with folded ears, or with folds on the ears.

Spelling and quoting of scientific names and authors

Despite the clear rules in the International Code of Zoological Nomenclature (ICZN) to promote stability and universality in the scientific names of animals, and to ensure that each name is unique and distinct, scientific names of some European bat

species are used by authors in several forms. The most frequent confusion is observed in the use of the suffix of specific scientific names ending with an "i" or "ii". For example, one can find the scientific name for the Daubenton's bat written as *Myotis daubentoni* or as *Myotis daubentonii*. A special section in the International Code of Zoological Nomenclature is devoted to this topic.

References to species described by Kuhl are dated by authors with the years 1817, 1818 or 1819. For example, one can find in publications references to *Nyctalus leisleri* with (Kuhl, 1817) or (Kuhl 1818), and to *Myotis mystacinus* with (Kuhl, 1817) or (Kuhl, 1819). Furthermore, parentheses around author's names (and dates) have a meaning.

Suffix i, or ii

- Species names derived from the Latinised personal names of males (i.e. names with the Latin endings shown here between brackets), such as d'Aubenton(ius), Bechstein(ius), Blyth(ius), Brandt(ius), Kuhl(ius), Nilsson(ius), and Schreibers(ius), should get the genitive ending "ii", hence *Myotis daubentonii* and *Pipistrellus kuhlii*.
- Species names derived from names which had already a Latin ending, such as Blasius and Nathusius, should also get a genitive ending "ii", hence *Rhinolophus blasii* and *Pipistrellus nathusii*.
- Species names derived from names of male persons originally ending with "i", as Capaccini and Savi, should also get a genitive ending "ii", hence *Myotis capaccinii* and *Hypsugo savii*.
- Species names derived from Latinised contemporary names of male persons

ending with "r", as Leisler(us) and Natterer(us), should get the genitive ending with a single "i", thus *Nyctalus leisleri* (the genitive of Leislerus) and *Myotis nattereri*.

- Dedication names to male persons of more recently described species have not been derived from Latinised names and should end with a single "i", e.g. *Plecotus kolombatovici* and *Pipistrellus hanaki*.

References to Kuhl

In 1817, Heinrich Kuhl published his monograph "Die deutschen Fledermäuse". This publication contained bat species formerly described by other authors along with the species newly described by Kuhl himself. Kuhl's monograph was issued in a limited number. Therefore, it was reprinted in two parts in the "Annalen der Wetterausischen Gesellschaft für die Gesamte Naturkunde" in 1818 and 1819 respectively. Nevertheless, the first edition of Kuhl's publication in 1817 was deposited in accordance with the rules of the ICZN, and therefore only this publication (and 1817 as the year of issue) should be used as a reference to species described by Kuhl. References to Kuhl 1818 and Kuhl 1819 are not correct.

References such as "*Pipistrellus kuhlii* Natterer, 1817", "*Pipistrellus kuhlii*, Natterer in Kuhl, 1817", "*Myotis bechsteinii* Leisler, 1817", or "*Myotis bechsteinii* Leisler in Kuhl, 1817" are not correct either. Neither Natterer nor Leisler described new bat species. They both provided information, collected bat specimens, and proposed species names to Kuhl, who described these newly discovered species in his monograph by himself.

Heinrich Kuhl (1797–1821). Kuhl described seven bat species listed in the Annex to the EUROBATS Agreement. Portrait from the collection of Naturalis Biodiversity Center, Leiden, the Netherlands.

Use of parentheses for author's names and dates

When a species-group name is combined with a generic name other than the original one, the name of the author of the species-group name, if cited, shall be enclosed with parentheses. The date, if cited, has also to be enclosed within the same parentheses, e.g. when the species originally described as *Vespertilio nathusii* by Keyserling and Blasius, 1839, was later reassigned to the genus *Pipistrellus*, the species had to be cited subsequently as *Pipistrellus nathusii* (Keyserling & Blasius, 1839).

The use of fonts in scientific names

The scientific names of genus- or species-group taxa should be printed in a type-face (font) different from that used in the text. Such names are usually printed in italics, which should not be used for names in

Street in Paris, France, dedicated to Louis-Jean Marie d'Aubenton (1716–1799).

Myotis daubentonii was named after him.

© Peter H.C. Lina

higher taxa, thus *Vespertilio murinus* and not *Vespertilio murinus*, but *Vespertilionidae* and not *Vespertilionidae*. Species group names always begin with a lower-case letter, even when the species name has derived from a person's name or a place, consequently *Pipistrellus nathusii* and not *Pipistrellus Nathusii*, similarly *Plecotus teneriffae* but not *Plecotus Teneriffae*. And whenever species-group names are cited, they shall always be preceded by its generic name or abbreviation (*Myotis daubentonii* or *M. daubentonii*). Formal names of all supraspecific taxa shall begin with the capital letter, thus *Rhinolophidae* and not *rhinolophidae*.

Street in Paris, France, dedicated to Carl Linné [Linnaeus] (1707–1758), who described *Vespertilio murinus* and *Plecotus auritus*.

* List 1 contains vernacular names in each language for all species included in Annex 1 to the EUROBATS Agreement. List 2 (page 66) includes all the national vernacular names, given separately for each of the species. A number which follows the name in List 1 corresponds to the number in front of a species name in List 2.

Armenian			
Ալկաթոյի գիւեքաչղջիկ	14	Մոխրագույն ականջեղ*	48
